

分数のたし算ひき算9

(分数と小数の計算)

年 組 名前()

次の計算をしましょう。

(1) $\frac{1}{9} + 0.7$

(9) $\frac{1}{2} - 0.2$

(2) $\frac{2}{3} + 0.5$

(10) $\frac{5}{7} - 0.5$

(3) $\frac{1}{8} + 0.75$

(11) $\frac{1}{2} - 0.25$

(4) $\frac{1}{9} + 0.3$

(12) $\frac{5}{6} - 0.6$

(5) $0.2 + \frac{2}{3}$

(13) $0.9 - \frac{2}{3}$

(6) $0.6 + \frac{3}{8}$

(14) $0.2 - \frac{1}{9}$

(7) $0.9 + \frac{2}{3}$

(15) $0.75 - \frac{1}{2}$

(8) $0.25 + \frac{1}{2}$

(16) $0.7 - \frac{4}{7}$

分数のたし算ひき算9

(分数と小数の計算)

年 組 名前()

次の計算をしましょう。

$$(1) \frac{1}{9} + 0.7 = \frac{1}{9} + \frac{7}{10} \\ = \frac{10}{90} + \frac{63}{90} = \frac{73}{90}$$

$$(9) \frac{1}{2} - 0.2 = \frac{1}{2} - \frac{1}{5} \\ = \frac{5}{10} - \frac{2}{10} = \frac{3}{10}$$

$$(2) \frac{2}{3} + 0.5 = \frac{2}{3} + \frac{1}{2} \\ = \frac{4}{6} + \frac{3}{6} = \frac{7}{6}$$

$$(10) \frac{5}{7} - 0.5 = \frac{5}{7} - \frac{1}{2} \\ = \frac{10}{14} - \frac{7}{14} = \frac{3}{14}$$

$$(3) \frac{1}{8} + 0.75 = \frac{1}{8} + \frac{3}{4} \\ = \frac{1}{8} + \frac{6}{8} = \frac{7}{8}$$

$$(11) \frac{1}{2} - 0.25 = \frac{1}{2} - \frac{1}{4} \\ = \frac{2}{4} - \frac{1}{4} = \frac{1}{4}$$

$$(4) \frac{1}{9} + 0.3 = \frac{1}{9} + \frac{3}{10} \\ = \frac{10}{90} + \frac{27}{90} = \frac{37}{90}$$

$$(12) \frac{5}{6} - 0.6 = \frac{5}{6} - \frac{3}{5} \\ = \frac{25}{30} - \frac{18}{30} = \frac{7}{30}$$

$$(5) 0.2 + \frac{2}{3} = \frac{1}{5} + \frac{2}{3} \\ = \frac{3}{15} + \frac{10}{15} = \frac{13}{15}$$

$$(13) 0.9 - \frac{2}{3} = \frac{9}{10} - \frac{2}{3} \\ = \frac{27}{30} - \frac{20}{30} = \frac{7}{30}$$

$$(6) 0.6 + \frac{3}{8} = \frac{3}{5} + \frac{3}{8} \\ = \frac{24}{40} + \frac{15}{40} = \frac{39}{40}$$

$$(14) 0.2 - \frac{1}{9} = \frac{1}{5} - \frac{1}{9} \\ = \frac{9}{45} - \frac{5}{45} = \frac{4}{45}$$

$$(7) 0.9 + \frac{2}{3} = \frac{9}{10} + \frac{2}{3} \\ = \frac{27}{30} + \frac{20}{30} = \frac{47}{30}$$

$$(15) 0.75 - \frac{1}{2} = \frac{3}{4} - \frac{1}{2} \\ = \frac{3}{4} - \frac{2}{4} = \frac{1}{4}$$

$$(8) 0.25 + \frac{1}{2} = \frac{1}{4} + \frac{1}{2} \\ = \frac{1}{4} + \frac{2}{4} = \frac{3}{4}$$

$$(16) 0.7 - \frac{4}{7} = \frac{7}{10} - \frac{4}{7} \\ = \frac{49}{70} - \frac{40}{70} = \frac{9}{70}$$
